**Betreff:** Request for input from national mirror committees - Options paper CEN/TC

Dear Lilian,

I sent the PT 1 A options paper (N 287) to the members of the Swedish mirror committee for road signs (AG3) and collected the comments.

I would like as a chairman of the AG3 to forward the our recommendations.

Sweden recommends option 3:

### **3. Introduce “new test method” and a sufficient number of “new classes”.**

This option will achieve the following:

- Introduce performance based requirements and allow distinction between retroreflective sheeting materials.
- Sufficient number of classes can make it easier for the road authorities to choose the materials which fit for different traffic situations.
- Not prevent the development and use of new materials
- Not hinder competitive

Best regards
