**Betreff:** RE: Request for input from national mirror committees - Options paper  
CEN/TC 226/WG 3/PT 1 A - DEADLINE 2016-08-31

Dear Mrs Panek,

After reviewing attachment "Enquiry into preferences between options for classes of retroreflection of retroreflective road sign materials" found in the document CEN/TC 226/WG3 N287 we as a Polish mirror committee TC 212 have come to the conclusion of supporting option 3: Introduce "new test method" and a sufficient number of "new classes".

The reasoning behind is as follows:

- new test methods are great tool to evaluate all currently available materials no matter
- what their construction is (beaded/prismatic) and therefore it will allow specifying
- agencies to specify the right materials for different road scenarios depending on its
- required, real performance; we agree that current methods are not suitable to test
- prismatic materials due to their fundamental difference (lack of symmetry, ability to form
- prisms to work in different way) vs glass beaded materials
- 3 new specification tables within class 3 are highly demanded and will allow specifiers
- to use exactly the material which is needed for specific road scenarios.
- 

Best regards,

Joanna Warszawska

**Subject:** Request for input from national mirror committees - Options paper CEN/TC 226/WG 3/PT 1 A - DEADLINE 2016-08-31

Dear members of CEN/TC 226/WG 3 and/or CEN/TC 226,

As you might be aware, CEN/TC 226/WG 3 is currently revising the standard series EN 12899 (all parts).

In WG 3 Project teams (PTs) responsible for the drafting of the different parts were instated at the beginning of the revision process. The Project Team "PT 1 A" is in charge of

**EN 12899-1-1 → Fixed, vertical road traffic signs — Part 1-1: Performance of retroreflective sign face materials (~ former draft prEN 12899-6)**

At the last meeting of CEN/TC 226/WG 3, PT 1 A sought guidance from the members of WG 3 because the PT could not agree on the further procedure. It was decided that PT 1 A would prepare a document with options and their clarification which then would be forwarded to the national mirror committees in order to obtain a direction/guidance from the different CEN member states (MS).

Please find this "options paper" attached with this email. We kindly request the document to be discussed in your national mirror committees a.s.a.p. in order to provide PT 1 A with the requested input and guidance.

If you are not an employee at a NSB (National Standardization Body) but merely an expert, please forward this email to your contact at the NSB of your country responsible for the appropriate mirror group.

Please be so kind as to send your national comments/opinion until **31<sup>st</sup> August 2016** at the latest via email to [lilian.panek@din.de](mailto:lilian.panek@din.de).

Feel free to contact me anytime if any doubts or questions remain.

Thank you very much for your cooperation and active participation in advance!

Best regards

Lilian  
Secretary CEN/TC 226/WG 3
